## CENTRAL GAS SUPPLY FOR INDUSTRIAL GASES

EDITION 1/2015

**GCE**  
Security in action

## GCE WORLDWIDE

### THE GCE BUSINESS

GCE has almost 100 years of experience in the manufacture and supply of high pressure gas equipment. During this time the GCE product range has increased dramatically. Today's product portfolio fits a large variety of applications, from simple pressure regulators and blowpipes for cutting and welding to highly sophisticated gas supply systems for the medical, electronic and analytical industries.

### GCE GROUP INCLUDES FOUR BUSINESS AREAS:

- Cutting & Welding
- Process Application
- Medical
- High Purity

### ORIGINS

The origins of GCE (Gas Control Equipment) go back to the start of the 20<sup>th</sup> century when Gas Welding was first invented. The GCE group was formed as an independent company in 1987 through the merging of two of the worlds leading gas and welding companies into one independent unit. GCE has grown rapidly since its establishment and is leading the restructuring of the European gas equipment industry through mergers and acquisitions.

Through its extensive Research and Development programs GCE has set standards that have become the benchmark for the whole industry.

### GCE SERVICES

The main industrial customers for GCE are wholesalers and local distributors. However in some markets GCE distributes equipment with the full cooperation of the main gas supplier for that market. For these companies GCE provides both commercial and technical support. A significant part of the sales volume in this area also comes from key end user accounts such as shipyards, repair shops, OEM customers and welding machine manufacturers.

### A COMPLETE RANGE FOR CUTTING & WELDING

GCE Group is one of the world's leading producers of industrial regulators for cutting and welding. The range covers a broad spectrum of products, for different applications, that have been designed according to the requirements of most European standards such as DIN, Afnor, BSI and Nordic.

The torch range includes products for heating, cutting, brazing and flame-cleaning applications designed in accordance with the preferences of individual markets and customers. Regulators, torches, nozzles and other products are also increasingly combined in sets and sold to users as a single package.

GCE Group is a pioneer in the field of safety equipment and currently produces a comprehensive range of flashback arrestors and hose check valves. A range of nozzles, including the longlife Coolex® nozzle, completes GCE's Cutting & Welding range.

GCE Group's ranges include various types of gas equipment enabling safe handling of gases in central gas supply systems and brewery equipment, to machine cutting products. We offer cylinder valves and combination valves, pressure control units, gas manifolds, outlet points, shut-off valves, alarm and safety units, high-pressure flexible hoses and accessories for different applications, gases, pressures and flow rates.

All products have to meet demanding requirements for rugged durability, leak-proof sealing and overall safety. Uniquely qualified in this area, GCE stands at the forefront of international development of these products.

### GLOBAL LEADER IN OXY-FUEL TECHNOLOGY

With extensive experience in the development and production of machine cutting torches and cutting nozzles, GCE Group is a global leader in oxy-fuel cutting technology. The design of the products is based on GCE's extensive knowledge and expertise in the oxy-fuel area.

## CENTRAL GAS SUPPLY

Central Gas Supply Systems (CGS) are generally based on high volume gas delivery, on-site gas stocking in special containers and gas distribution from these high capacity sources up to the final applications. Gas can be delivered from the production plant either in liquefied form, mainly using cryogenic systems, or in gaseous high-compressed form mostly using steel cylinders or bundles of cylinders. When CGS is installed on-site and used, gas goes from the source (stable or mobile cryogenic vessel with vaporizer, cylinders bundle, cylinder or special container) through a high pressure manifold with a pressure regulator where the inlet pressure from the bulk is reduced to the level acceptable for a gas distribution system (GDS). GDS is usually made of mild steel, stainless steel or copper pipework transporting gas to the application. At the end of the pipeline, outlet points would be fitted to set gas parameters e.g. pressure and flow-rate according to application request. When CGS systems are installed in industrial plants, working efficiency, economic savings and safety aspects will grow in relation to increased gas consumption.

### CENTRAL GAS SUPPLY SYSTEM:

- reliable supply system
- continuous gas delivery - no gas flow interruptions
- more precise gas parameters adjustment
- higher safety level because of outdoor gas storage & outdoor high pressure installation
- more space at the working place
- usually lower gas costs due to high volume delivery

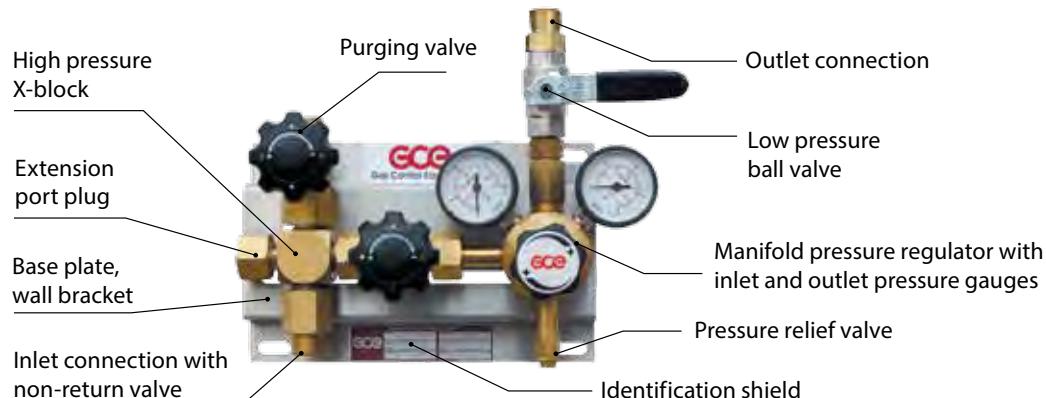

### GCE INDUSTRIAL CGS-PRODUCTS ARE TO BE USED IN FOLLOWING

- FIELDS OF ACTIVITIES:**
- Automotive and transportation
  - Metal & glass & plastics & paper production and fabrication
  - Chemical & petrochemical industry
  - Metallurgy
  - Oil & gas refinery
  - Off-shore & shipyards
  - Ecology & environment
  - Food & beverages production and packaging (see also special GCE Beverage product range)
  - Craftsmen & workshops
  - On-site constructions

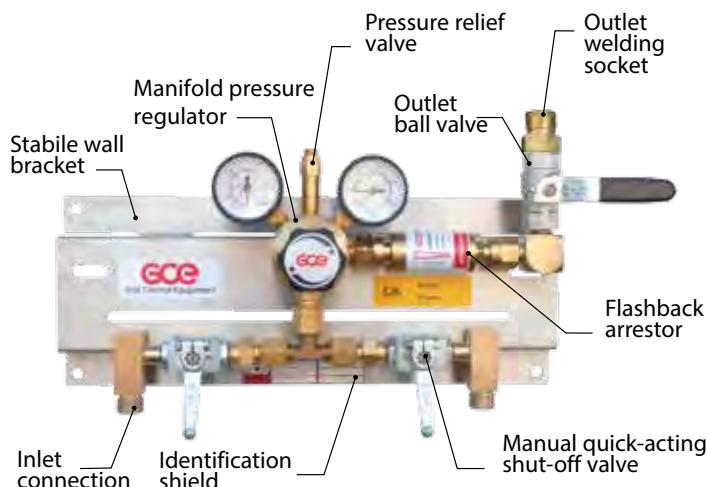

### TYPICAL INDUSTRIAL APPLICATIONS:

- Flame, arc, plasma and laser welding
- Oxy-fuel, plasma and laser cutting
- Various heating processes
- Gas supply for metallurgical and chemical processes
- Glass melting and heating
- Glass & metals melting intensification
- Inertization & Neutralization
- Waste water treatment gas supply
- Food packaging

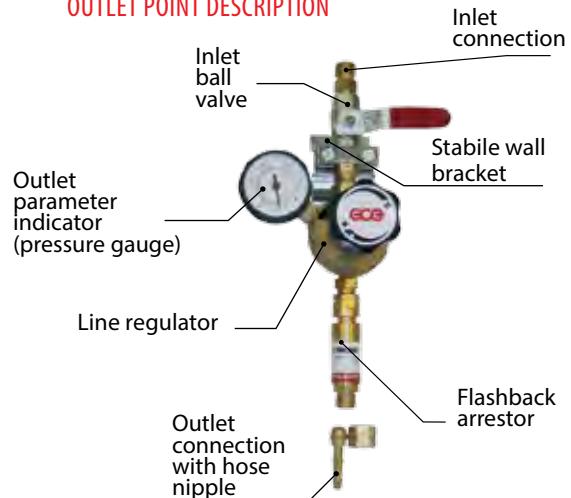

### DESCRIPTION OF THE OXYGEN MANIFOLD

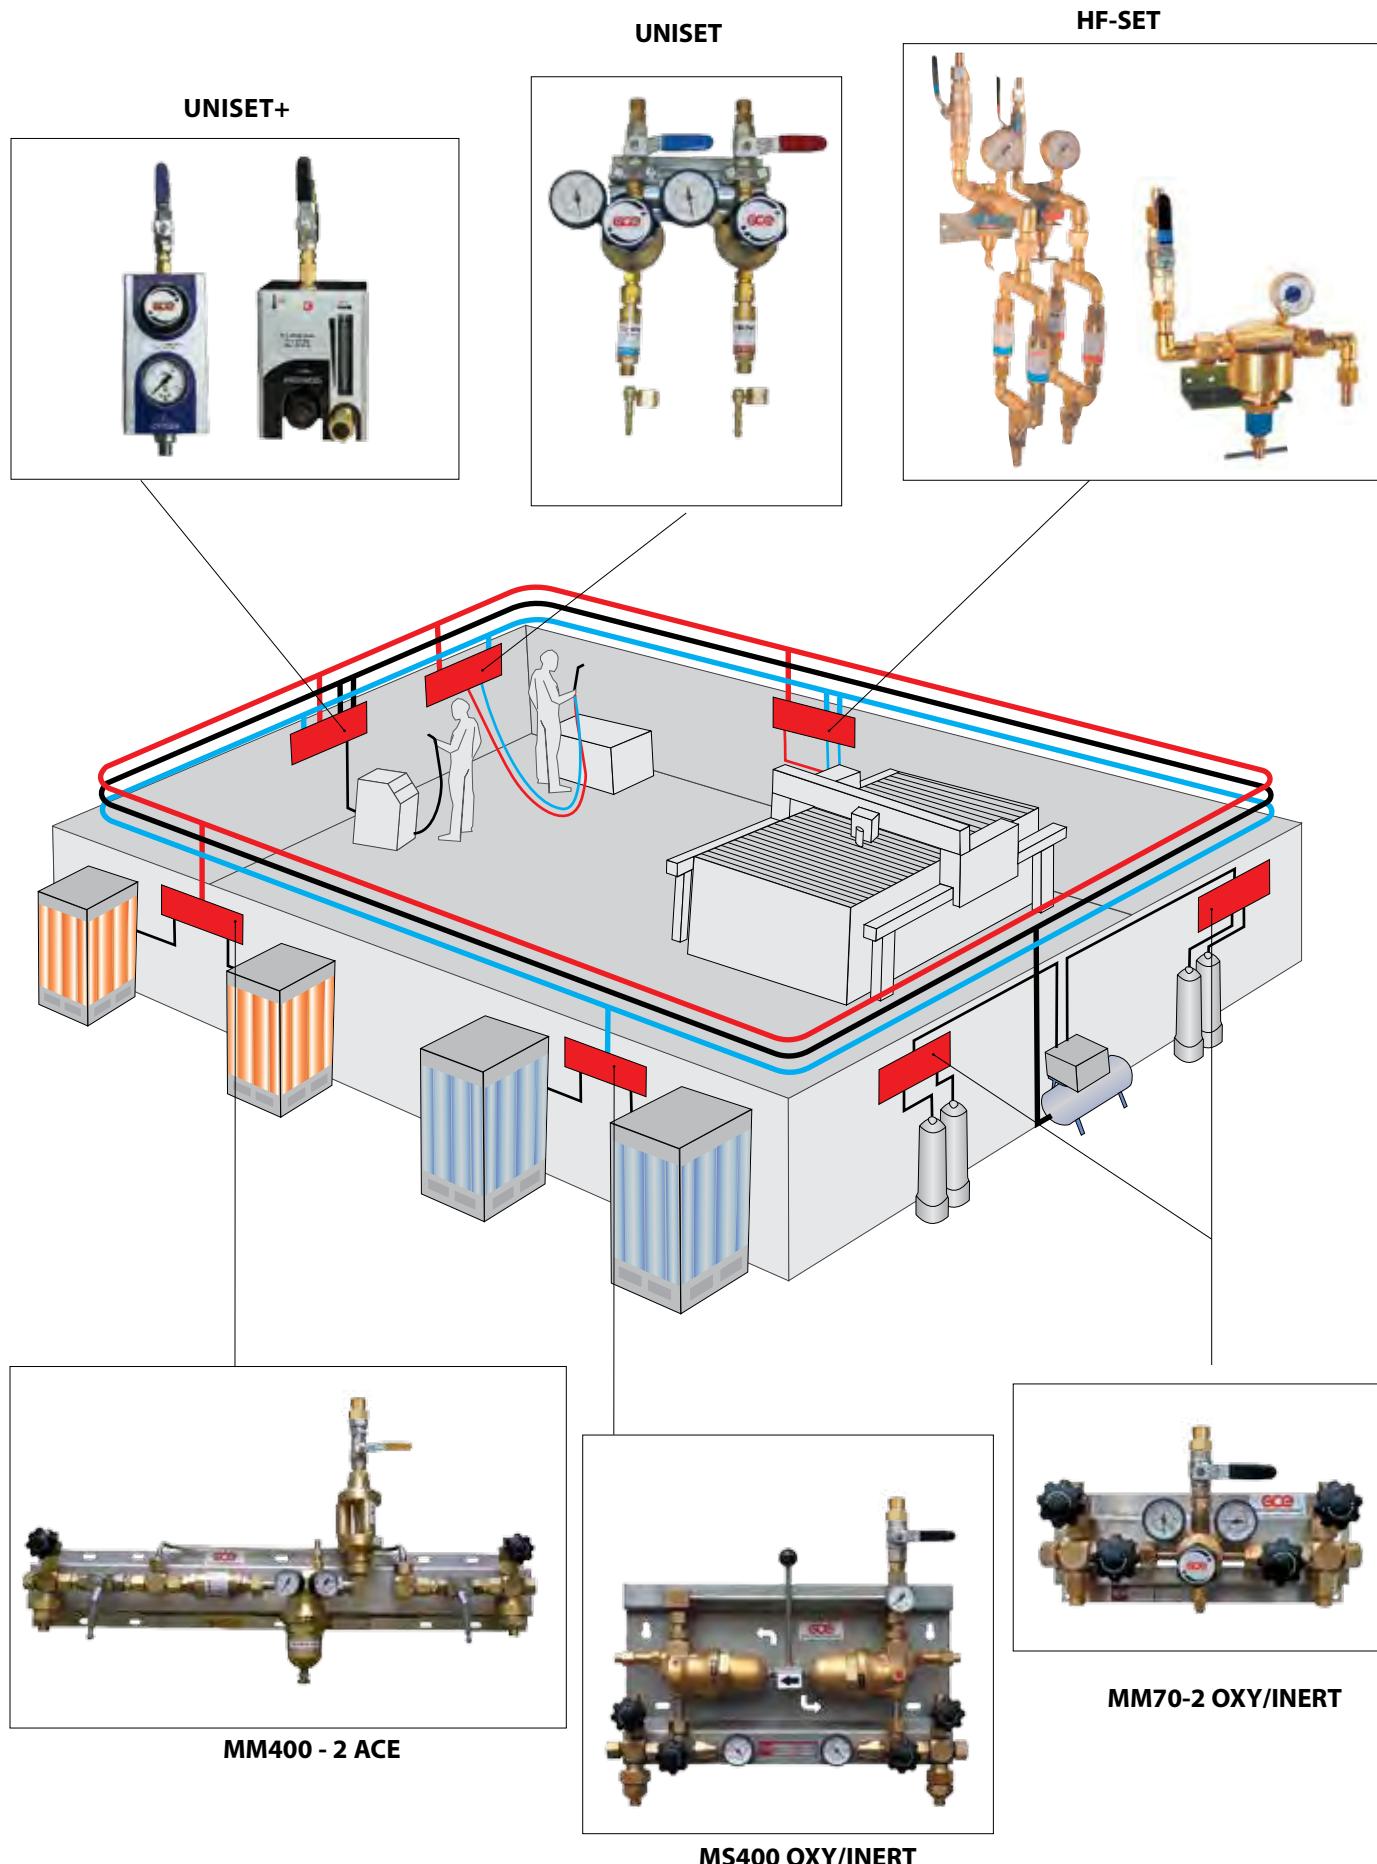

### DESCRIPTION OF THE ACETYLENE MANIFOLD

### OUTLET POINT DESCRIPTION

## CENTRAL GAS SUPPLY SYSTEM SCHEME

## HIGH PRESSURE MANIFOLDS OVERVIEW

### PROLINE SINGLE CYLINDER UNIT

Gas manifolds for small- and middle-flow applications. Simple manifolds and manual changeover units, semiautomatic and automatic units.

**MM70 -1**

**MM400-1, high flow**

### PROLINE MANUAL CHANGEOVER MANIFOLD

Gas manifolds for high-flow applications. Simple manifolds, manual changeover and semiautomatic units.

**MM70-2**

**MM400-2, high flow**

### PROLINE AUTOCHANGE MANIFOLD

Compact semiautomatic gas manifolds range with Maxiflow unit. For different gases and applications, one- or double-stage design.

**MAXIFLOW 2/2**

**MS400, high flow**

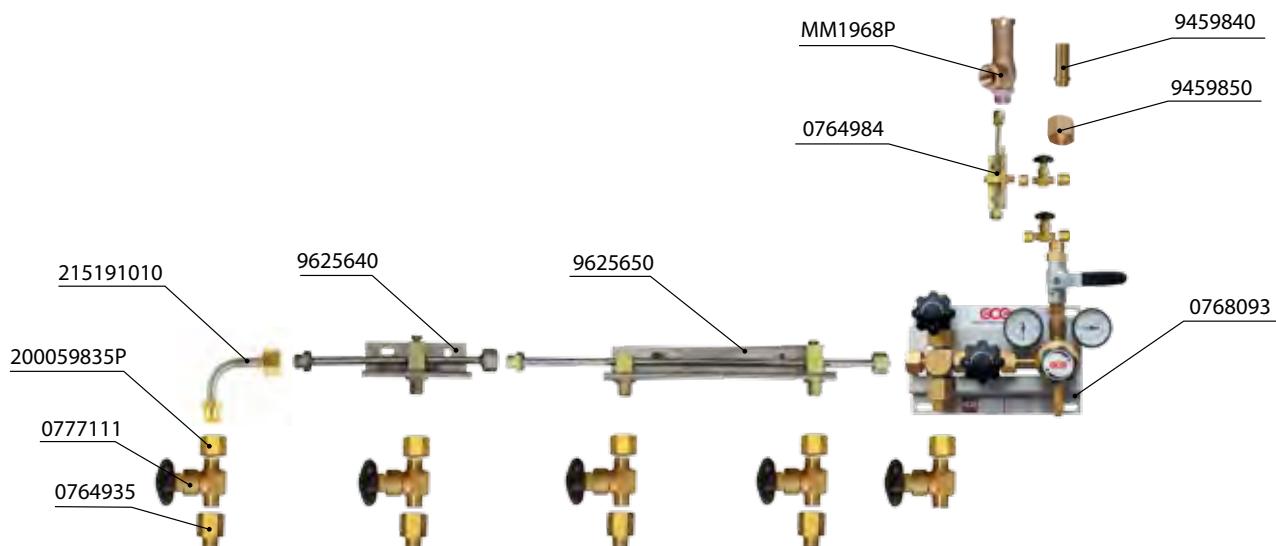

## PROLINE SINGLE CYLINDER UNIT

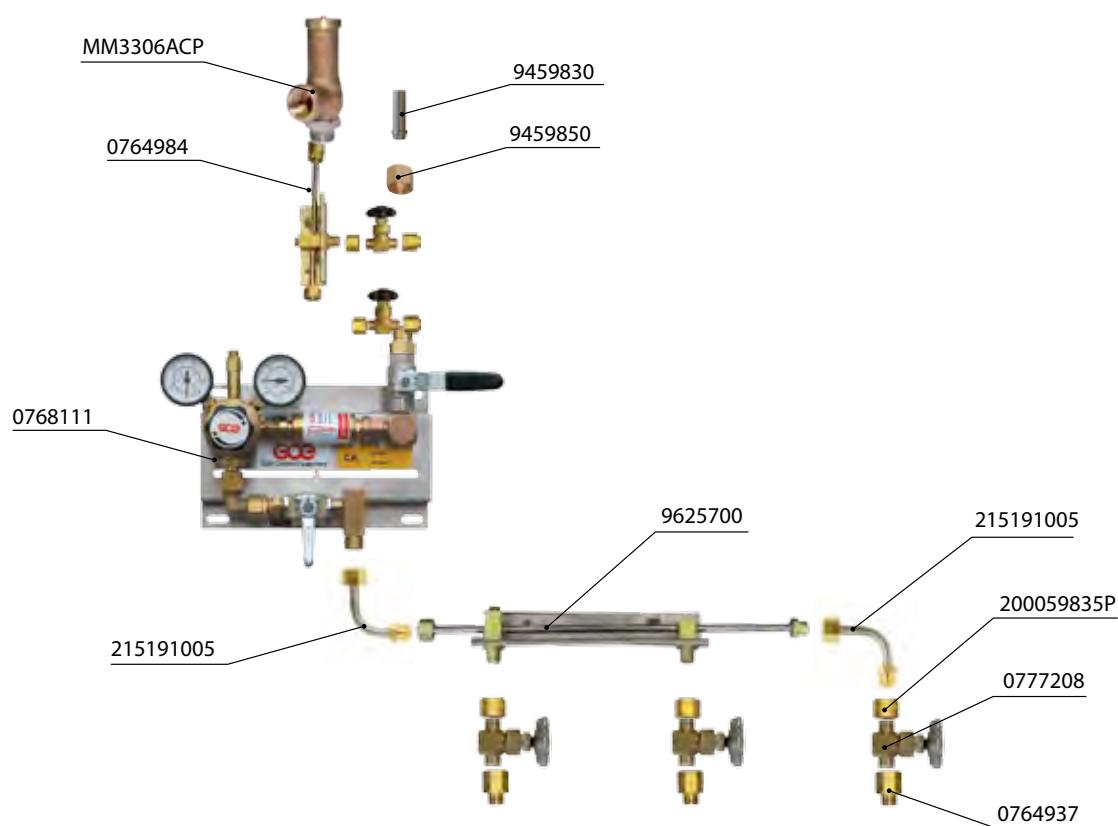

Gas manifold panels for different gases with inlet pressure up to 300bar. Manifolds contain inlet x-block with non-return valve and filter, purge valve and second inlet from site with the potential to install extension units. Purge valves can be used for pressure release when cylinder/bundle hose is disconnected. There is also a high pressure shut-off valve, regulator with pressure relief valve and outlet ball valve mounted on the stainless steel panel.

Acetylene variant of MM70-1 manifold for cylinder service. It is designed and produced in accordance with ISO 14 114. There is a manual quick acting shut-off valve upstream of the regulator. There is a flashback arrestor GVA 90 (EN 730-1, ISO 5175) mounted downstream of the regulator and also an outlet ball valve.

**MM70-1 for 5 Oxygen cylinders with SE-2, SE-1, shut-off valves and non-return valves**

**MM70-1 for 3 Acetylene cylinders with SE-2, shut-off valves and non-return valves**

## SE LINE HEADERS

High pressure manifold extension unit. SE-line manifolds contain collecting tubes in adjustable positions. The axial distance between the tube and wall bracket is changeable. This enables SE-line application for both M70 line and M400 line manifolds. The tube and the wall bracket are made of stainless steel. The connection blocks are made of brass. One block will always include an outlet connection for the optional fitting of a gauge or contact alarm gauge.

## GAS PREHEATER - GGP 200

Inlet pressure up to 300bar for inert gases. The expansion of high compressed gases i.e. CO<sub>2</sub> and argon CO<sub>2</sub> mixtures can cause freezing in regulators. This could require a gas preheater to prevent freezing of the pressure regulator and other components of gas manifolds. Use of a preheater is recommended for higher stability of gas flow in central gas supply systems. GGP 200 is a reliable CE marked product.

Art. Nr.	Description	Gas, Pressure	Inlet	Outlet

## PROLINE MANIFOLD, MANUAL CHANGEOVER

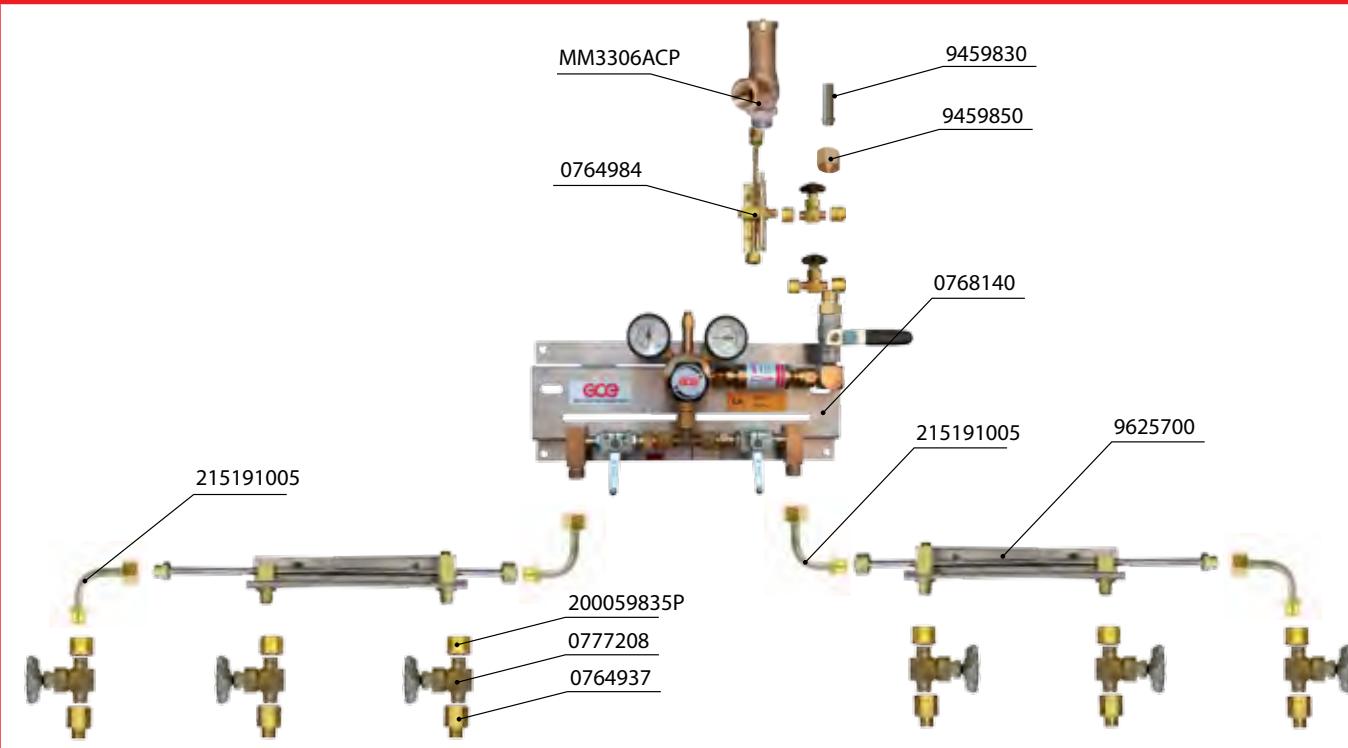

Manual changeover manifold for different gases with inlet pressure up to 300bar. On both outlet sides there are x-blocks with non-return valves and filters, purge valves and second inlets from sites for extension units. Shut-off valves, regulators with pressure relief valves and outlet ball valves, as well as other components, are mounted on the stainless steel panel.

Acetylene variant of MM70-2 manual changeover manifold for cylinder service. It is designed and produced in accordance with ISO 14 114. There are manual quick acting shut-off valves at each inlet side, upstream of the regulator. These devices are tested according to ISO 15 615. There is a flashback arrestor GVA 90 (EN 730-1, ISO 5175) mounted downstream of the regulator and also an outlet ball valve.

**MM70-2 for 2x3 Oxygen cylinders with SE-1, shut-off valves, non-return valves and safety valve assembly**

## SE LINE HEADERS

High pressure manifold extension unit. SE-line manifolds contain collecting tubes in adjustable positions. The axial distance between the tube and the wall bracket is changeable. This enables SE-line application for both M70 line and M400 line manifolds. The tube and the wall bracket are made of stainless steel. Connection blocks are made of brass. One block will always include an outlet connection for the optional fitting of a gauge or contact alarm gauge.

## PROLINE AUTOCHANGE MANIFOLD

A unique compact semi-automatic solution for high pressure gas supply. This manifold integrates many different high pressure components in the central changeover block. Due to this specific design aspect, potential leakages are minimised. This ensures high safety standards and eliminates uncontrolled gas consumption, creating additional profit for the user.

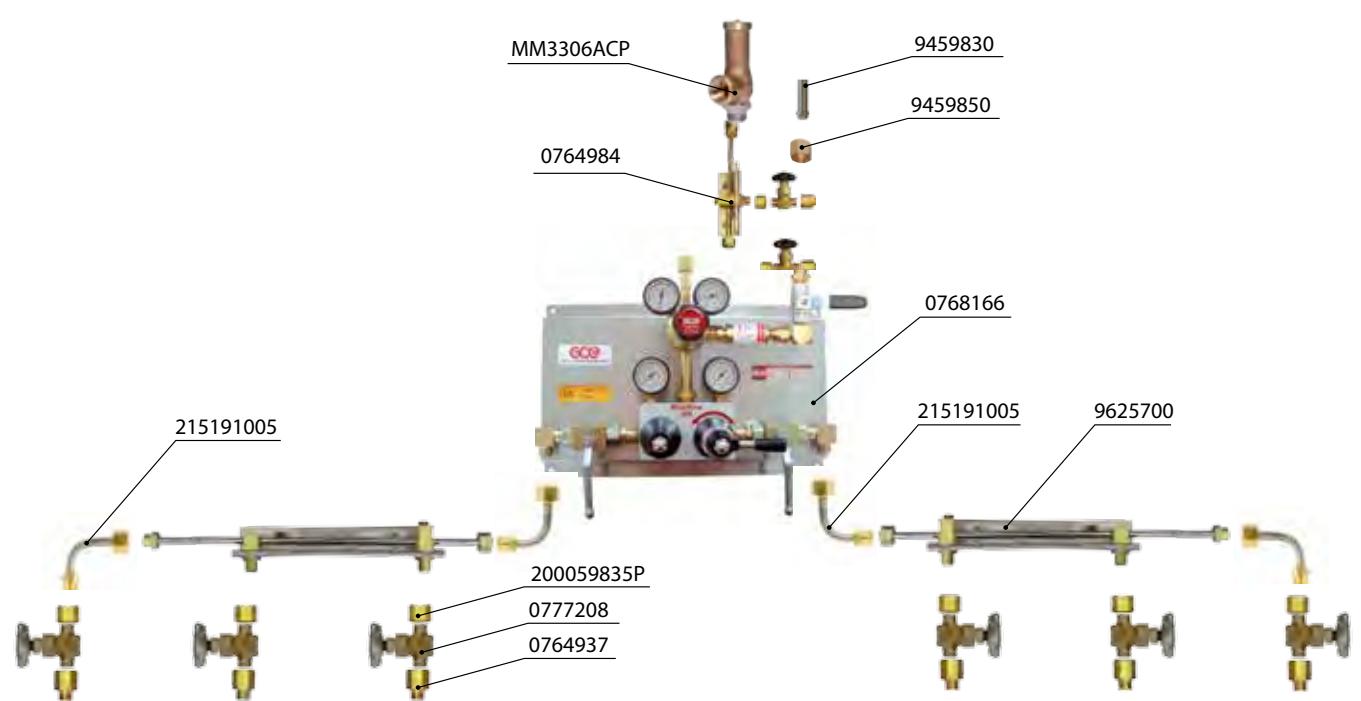

### MAXIFLOW BRASS BLOCK CONTAINS FOLLOWING COMPONENTS:

- 2 inlet connections with sintered filters
- two regulators for semiautomatic operation
- inlet shut-off valves at both sides
- purge valves for high pressure part purging and for pressure release
- two HP gauges (contact gauges optionally)
- pressure relieve valve
- outlet connection with ball valve

**Maxiflow for 2×2 Oxygen cylinders with SE-1, shut-off valves, non-return valves, safety valve assembly and contact alarm gauges**

**Maxiflow for 2×3 Acetylene cylinders with SE-2, shut-off valves, non-return valves and safety valve assembly**

## MAXIFLOW UNIT

Semi-automatic auto-change gas manifold for compressed gases with inlet pressure of up to 300bar. This product can ensure continuous gas supply without any application process interruption. Manifolds have the option for fitting contact gauges to relay information regarding gas depletion. It is a dual-stage regulation unit giving stable outlet pressure parameters. The unit consists of a brass changeover block which is the stable base for installation of other components. There are few internal connections which means minimal risk of leakages.

Semi-automatic auto-change gas manifold for acetylene. This product can ensure continuous gas supply without any application process interruption. There is a variant available with contact gauges to give information about gas depletion. It is a dual-stage regulation unit giving stable outlet pressure parameters. The product is designed and produced in accordance with ISO 14114. The inlet manual quick acting shut-off valves and regulators are tested according to requirements of ISO 15615. Also fitted on the outlet is a flashback arrestor GVA90 (EN 730-1, ISO 5175) and an isolating ball valve.

## SE LINE HEADERS

High pressure manifold extension unit. SE-line manifolds contain collecting tubes in adjustable positions. The axial distance between the tube and the wall bracket is changeable. This enables SE-line application for both M70 line and M400 line manifolds. The tube and the wall bracket are made of stainless steel. Connection blocks are made of brass. One block will always include an outlet connection for the optional fitting of a gauge or contact alarm gauge.

## PROLINE SINGLE CYLINDER UNIT HIGH FLOW

Gas manifold panel with regulators MR60 or MR400 for high-flow applications for different gases with inlet pressure of up to 300bar. Manifolds contain inlet x-block with non-return valve and filter, purge valve and second inlet from site with the potential to install extension units. Purge valves can be used for pressure release when cylinder/bundle hose is disconnected. There is also a high pressure shut-off valve, regulator with pressure relief valve and outlet ball valve mounted on the stainless steel panel.

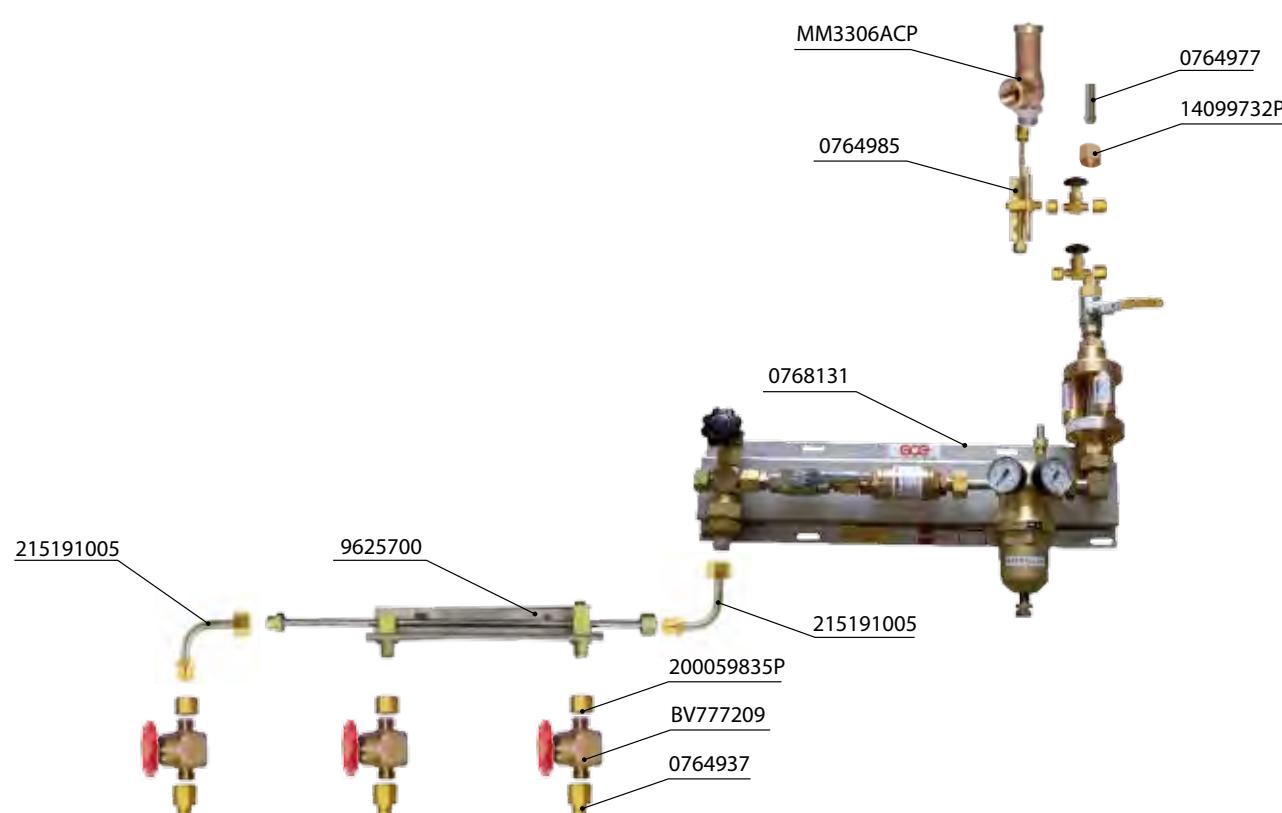

Gas manifold with regulator for MR60 for high-flow acetylene applications.

Acetylene variant of MM400-1 is designed and produced in accordance with ISO 14114. The inlet x-block with mounted purge valves, non-return valves and filters, enables safe operation with high pressure acetylene. There are used manual and also automatic quick acting shut-off valves upstream of the regulator. These devices are tested according to ISO 15615. There is a flashback arrestor Simax 3 (EN 730-1, ISO 5175) fitted downstream of the regulator and also an outlet ball valve.

**MM400-1 for 5 Oxygen cylinders with SE-1, SE-2, shut-off valves, non-return valves and safety valve assembly**

**MM400-1 for 3 Acetylene cylinders with SE-2, shut-off valves, non-return valves and safety valve assembly**

## SE LINE HEADERS

High pressure manifold extension unit. SE-line manifolds contain collecting tubes in adjustable positions. The axial distance between the tube and the wall bracket is changeable. This enables SE-line application for both M70 line and M400 line manifolds. The tube and the wall bracket are made of stainless steel. Connection blocks are made of brass. One block will always include an outlet connection for the optional fitting of a gauge or contact alarm gauge.

## GAS PREHEATER - GGP 200

H28054801

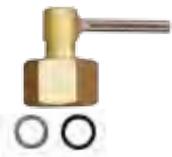

Inlet pressure up to 300bar for inert gases. The expansion of high compressed gases i.e. CO<sub>2</sub> and argon CO<sub>2</sub> mixtures can cause freezing in regulators. This could require a gas preheater to prevent freezing of the pressure regulator and other components of gas manifolds. Use of a preheater is recommended for higher stability of gas flow in central gas supply systems. GGP 200 is a reliable CE marked product.

## PROLINE MANUAL CHANGEOVER MANIFOLD HIGH FLOW

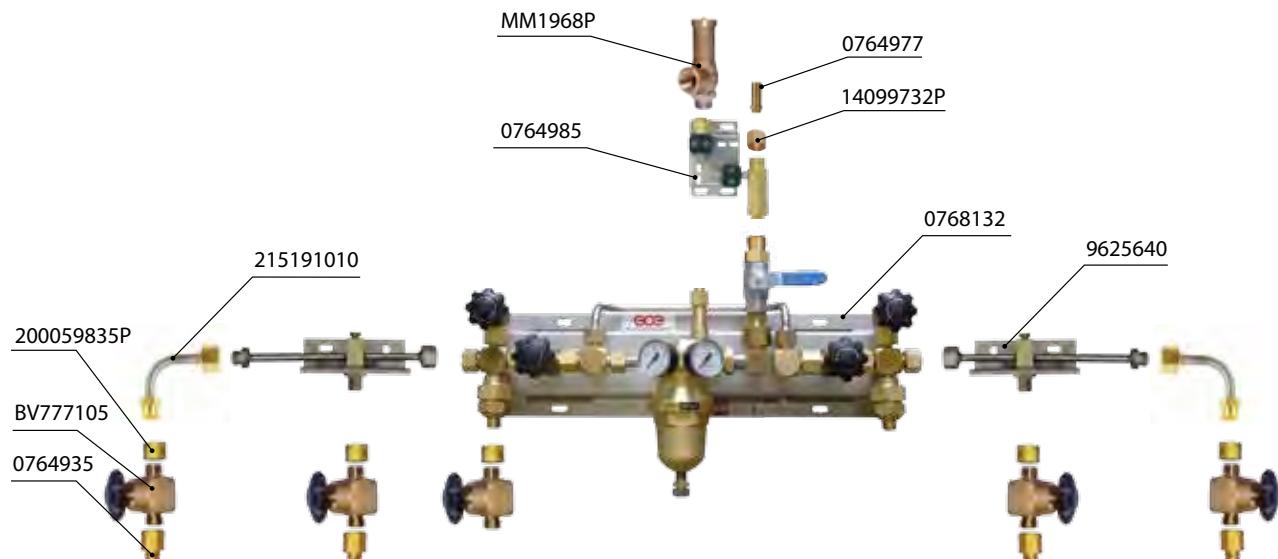

Manual changeover manifold with regulators MR60 or MR400 for high-flow applications for different gases with inlet pressure up to 300bar. Manifolds contain inlet x-block with non-return valve and filter, purge valve and second inlet from site with the potential to install extension units. Purge valves can be used for pressure release when cylinder/bundle hose is disconnected. There is also a high pressure shut-off valve, regulator with pressure relief valve and outlet ball valve mounted on the stainless steel panel.

Gas manifold with regulator for MR60 for high-flow acetylene applications.

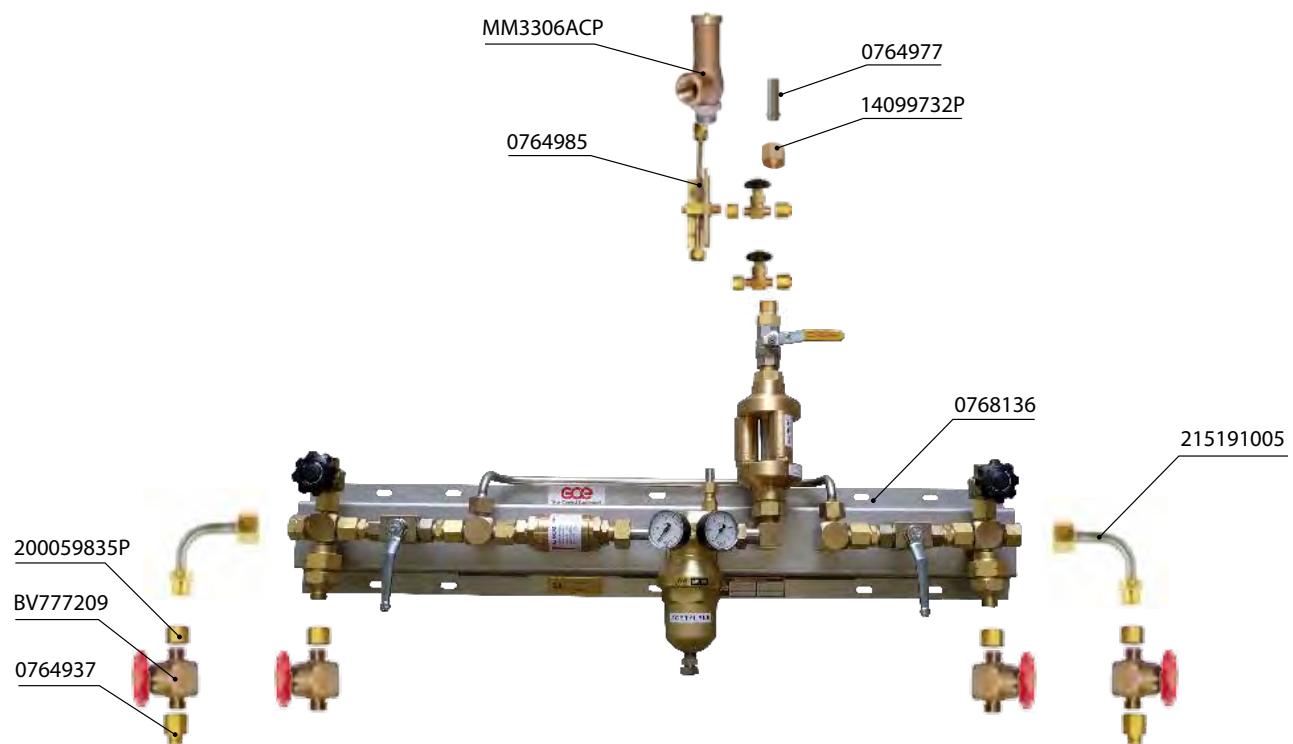

Acetylene variant of MM400-2 is designed and produced in accordance with ISO 14 114.

The inlet x-block with mounted purge valves, non-return valves and filters, enables safe operation with high pressure acetylene. There are used manual and also automatic quick acting shut-off valves upstream of the regulator. These devices are tested according to ISO 15 615. There is a flashback arrestor Simax 3 (EN 730-1, ISO 5175) fitted downstream of the regulator and also an outlet ball valve.

**MM400-2 for 2×3 Oxygen cylinders with SE-1, shut-off valves, non-return valves and safety valve assembly**

**MM400-2 for 2×2 Acetylene cylinders with shut-off valves, non-return valves and safety valve assembly**

## SE LINE HEADERS

High pressure manifold extension unit. SE-line manifolds contain collecting tubes in adjustable positions. The axial distance between the tube and the wall bracket is changeable. This enables SE-line application for both M70 line and M400 line manifolds. The tube and the wall bracket are made of stainless steel. Connection blocks are made of brass. One block will always include an outlet connection for the optional fitting of a gauge or contact alarm gauge.

## GAS PREHEATER - GGP 200

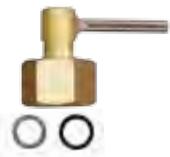

Inlet pressure up to 300bar for inert gases. The expansion of high compressed gases i.e. CO<sub>2</sub> and argon CO<sub>2</sub> mixtures can cause freezing in regulators. This could require a gas preheater to prevent freezing of the pressure regulator and other components of gas manifolds. Use of a preheater is recommended for higher stability of gas flow in central gas supply systems. GGP 200 is a reliable CE marked product.

## PROLINE AUTOCHANGE MANIFOLD HIGH FLOW

The MS400 semi-automatic manifold reduces compressed gases of max. 300bar to a continuous gas supply of 18-22bar or 37-43bar. It is designed for two types of gas source (cylinders or cylinder bundles). However, only one side at a time is the operating one and the other is then the reserve side.

The MS400 will ensure continuity of gas flow by automatically changing from a nearly empty side to a full (reserve) side. MS400 is a complete valve unit with high pressure filters, isolating valves, purge valves, regulators, auto-change unit and a low pressure pipe with line shut-off valve. Components are assembled and fitted on the stable stainless steel plate. The inlet x-block contains a spare port for extensions for more gas sources.

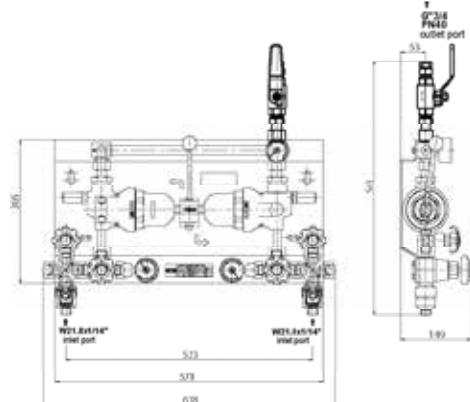

MS400 can be used for oxygen and inert gases as nitrogen, argon, CO<sub>2</sub> and their mixtures. The variant for fuel gas can be used for hydrogen, methane and their mixtures. It is the optimal solution for continuous gas supply for industrial applications as e.g. welding & cutting, assisting gas supply for laser cutting and many other applications. There are also variants with contact gauges giving alarm information about switching over to reserve side.

**MS400 for 2x3 Oxygen cylinders with SE-1, shut-off valves, non-return valves and safety valve assembly**

## CENTRAL GAS DISTRIBUTION - OUTLET POINTS

### PRODUCTS OVERVIEW

#### UNISET

- Outlet points for applications and gases variants
- Unicontrol regulator type
- Available as single, double or twin units
- Design with pressure gauges, flow gauges or flowmeters with different outlet pressure and flow rate ranges

#### UNISET+

- Outlet points with steel protection
- Unicontrol regulator type
- Design with pressure gauges, flow gauges or flowmeters
- For different outlet pressure and flow rate ranges

#### HF-SET

- High flow outlet points for 100Nm<sup>3</sup>/h or 200Nm<sup>3</sup>/h
- S100 and S200 regulators
- For oxygen and fuel gases
- Different versions as single or triple units
- Designed especially for oxygen cutting machines and other high-flow applications

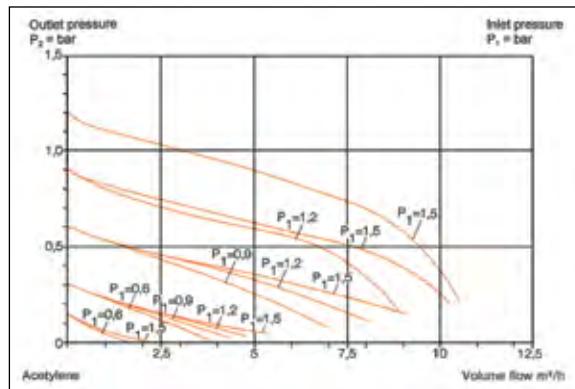

## UNISET

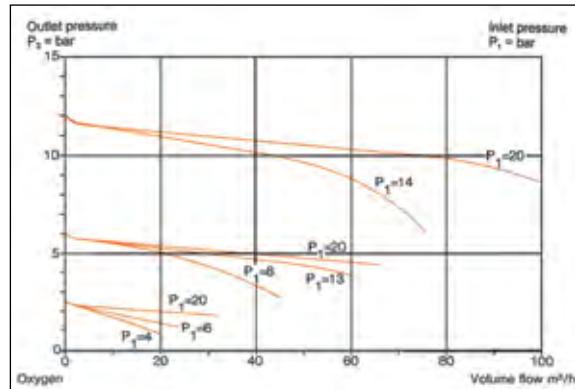

UNISET are new outlet points in GCE's proposal for industrial gases service. They were created using the long term experience with production of central gas supply systems. Variants for oxygen and fuel gases are equipped with three function flashback arrestors (FBA). There are two design types for shielding gases. The first consists of flow-gauge showing flow-rate adjusted by a pressure regulator. The second one is based on a flow-meter with an adjustment valve supplying and indicating the exact flow-rate. Components of the entire range are mounted on a stable steel wall bracket ensuring fast and safe installation. Gas supply can easily be connected to the application with outlet hose nipples.

Oxy/inert is ready for oxygen service and can also be used for argon, nitrogen, helium, carbon dioxide, compressed air and their mixtures. Special oxygen variants as well as acetylene and propane variants contain FBA. The fuel gas variant is designed for hydrogen, methane and natural gas. Unisets for shielding gases (Ar and Ar mixtures) show adjusted flow-rate using either pressure gauge with flow-scale or flow-meter. The special twin variant enables the connection of two welding generators at one outlet pipe. This can also be used for the combination of welding and root shielding with identical gas. Flow variant for N<sub>2</sub>/H<sub>2</sub> and Ar/H<sub>2</sub> with outlet capacity of 50 l/min is optimal for root shielding application.

## UNISET+

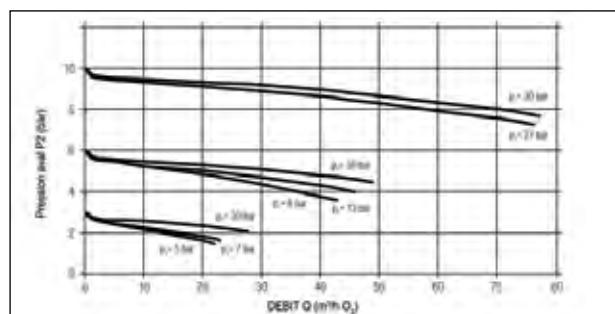

UNISET+ outlet points are an innovation in the field of central gas supply in deed. Excellent protection, given by the external steel cover, is combined with excellent look and easy assembly. Their high precision gives the possibility to use them with any industrial application.

UNISET+ outlet points are based on inlet ball valve and line pressure regulator. All variants include inlet brazing socket for 8 mm tube and outlet hose nipple. Oxygen, acetylene and fuel gas version contain also pressure gauge and outlet safety device MV93. MV93 is flashback arrestor protecting pipe works and gas source against flame coming from application in case of safety issue. There are two types for shielding gases (Ar, Ar/CO<sub>2</sub> and Ar/O<sub>2</sub> mixtures). First of them consists of flow-gauge showing flow-rate adjusted by pressure regulator. The second one is based on flow-meter with dosing valve giving and showing exact flow-rate.

UNISET+ outlet points are also called „Easy Work“ because of fast installation and easy handling. They can be mounted in less than 15 minutes, using appropriate tools.

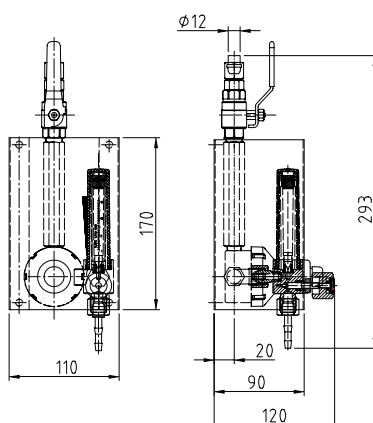

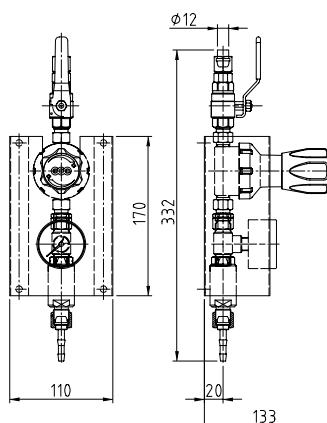

Maintenance operation thus makes very simply to be executed by just removing the metal cover, fully independent from the internal parts.

## HF-SET

HF-set are outlet points for high flow applications. They were originally designed for the installation of oxygen cutting machines but, because of their high flow capacity, they can be used for all industrial processes. Outlet points are based on two regulators. The S100 regulator is prepared for oxygen, acetylene and propane (this can also be used for natural gas). The maximal flow capacity of a S100 regulator is 100 Nm<sup>3</sup>/h for oxygen and 20 Nm<sup>3</sup>/h for fuel gases. Options can be added such as flashback arrestor GVA 90 or GVO 90. The S200 regulator is designed for oxygen and has a maximal flow capacity of 200 Nm<sup>3</sup>/h. The maximal inlet pressure of HF-set outlet points is 30bar for oxygen and 40bar for other industrial gases

### HF S100/S200

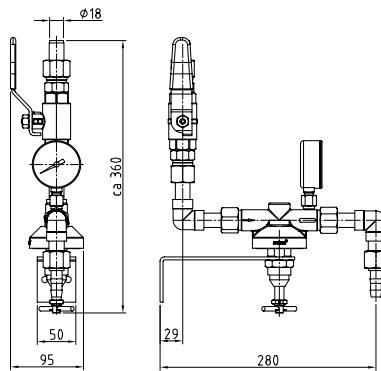

Type S200

Individual high-capacity outlet points for various industrial oxy-fuel applications. There are versions for oxygen with S100 or S200 regulators, version for acetylene and for propane, both with S100 (BG20) regulator. Products can be equipped with flashback arrestor (FBA) GVO90 or GVA90.

Type S100

### HF TRIPLE S100

Three outlet points with S100 regulators mounted on the stable wall bracket. Outlets for heating oxygen as well as for fuel gas contain three function flashback arrestor for GVO 90 and GVA 90.

Art. Nr.	Description
<b>14016180</b>	S 100 triple unit oxy/acetylene
<b>14016181</b>	S 100 triple unit oxy/propane

#### TECHNICAL DATA - MAX. FLOW CAPACITY

Cutting oxygen	100 m <sup>3</sup> /h
Heating oxygen	100 m <sup>3</sup> /h
Fuel gas	20 m <sup>3</sup> /h

### HF TRIPLE S200

These triple outlet points are based on S200 regulator for cutting oxygen. Heating oxygen and fuel gas are supplied by S100 regulators, both with twin-connected three function flashback arrestor GVO90 and GVA90.

Art. Nr.	Description
<b>14016182</b>	S 200 triple unit oxy/acetylene
<b>14016183</b>	S 200 triple unit oxy/propane

#### TECHNICAL DATA - MAX. FLOW CAPACITY

Cutting oxygen	200 m <sup>3</sup> /h
Heating oxygen	100 m <sup>3</sup> /h
Fuel gas	20 m <sup>3</sup> /h

These Point-of-use systems are designed for high performing applications, i.e. machine cutting and automated heating and similar applications, where standard point-of-use stations do not provide sufficient capacity and flow and where it is not necessary to regulate gas pressure at the outlet of the pipeworks.

## HF BV, BALL VALVE UNIT

## DEMAX/SIMAX - 3 FUNCTION MANIFOLD FLASHBACK ARRESTORS

The manifold (line) flashback arrestors of the SIMAX and DEMAX family are products specially designed to provide maximal flow rate with minimal pressure drop necessary for central gas manifolds or cylinder bundle supply systems. Enormous flow capacity, without any compromising or safety, is achieved by the splitting of large gas flow into several sections protected by individual flame arresting units. Complies with EN730, German BAM institute tested.

Many other higher capacity variants (SIMAX 5/8...) are available on request. To reach optimal performance and before

SIMAX / DEMAX offers following safety functions:

- FA Sintered flame arresting element
- NV Non return valve to prevent reverse flow of gases
- TV Thermal trip device, activated by heat to permanently cut off the gas supply.

Art. Nr.	Gas	Description	Function	Max pressure	Connection thread	Weight
0764433	OXY	FBA DEMAX-5 Oxy G1/2" RH	NV, FA, TV	15 bar	G1/2"RH	1,45 kg

## GCE SAFE-GUARD-5

The latest innovation from GCE the SAFE-GUARD-5 offers the maximum level of protection required by EN730-1 to prevent dangerous flashbacks from reaching the regulator and cylinder supply sources.

### FUNCTIONS

- Flame arresting element (FA)
- Non return valve (NV)
- Pressure sensitive cut off valve (PV)
- Temperature sensitive cut off valve (TV)
- Reset mechanism to clearly advise unit activation (RM)

MANAGEMENT SYSTEM CERTIFICATE**

Certificate No. 109396-2012-AQ-CZS-NA

This is to certify that the Management System of:

**GCE Holding AB**

Källvattengatan, SE-200 21, Malmö, Sweden

has been found to conform to the standard:

**ISO 9001:2008**

This Certificate is valid for the following product or service ranges:

Design, production, sales and servicing of equipment for using of technical gases in industry. Pressure regulators, closing, combined and special valves, cutting, welding, heating and brazing torches, safety equipment, speciality torches, fittings, accessories for industrial purposes.

Initial Certification date:

28 February 1997

This Certificate is valid until:

28 February 2015

**Certificate of conformity**

We GCE, s.r.o., Židkova 381, 58381 Chotěboř, Czech Republic, confirm that our product range:

**Central gas supply systems for industrial applications (CGS)**

is developed and manufactured according to the valid and accepted international standards and in accordance with the sound current engineering practice, especially with respect to following:

- The use of materials in the gas welding area which meets the gas type specific requirements
- Design and production procedures of the gas supply equipment meets the used pressure gas type specific requirements
- Special cleaning procedures for high purity and ultra high purity gas application
- All products go through a final functional and leak test
- All products are packed according to the instruction to avoid inadmissible contamination
- An applied quality assurance system according to ISO 9001:2008 is established

We also confirm that product range:

**Pressure regulators for CGS**

is developed and manufactured according to ISO 7231/2010: Gas welding equipment – Pressure regulators for manifold systems used in welding, cutting and allied processes up to 300 bar

We also confirm that product range:

**Acetylene manifold systems**

is developed and manufactured according to ISO 14114:1999: Gas welding equipment – Acetylene manifold systems for welding, cutting and allied processes – General requirements and according to ISO 13415:2013: Gas welding equipment – Acetylene manifold systems for welding, cutting and allied processes – Safety requirements in high-pressure devices

The safety instructions of the product manual delivered with the goods have to be followed. This certificate confirms the conformity of a.m. European regulation.

GCE Group is one of the world's leading companies in the field of gas control equipment. The headquarters are in Malmö, Sweden, and the two major supply units are located in Europe and Asia. The company operates 15 subsidiaries around the world and employs more than 850 people. GCE Group includes four business areas –Cutting & Welding, Process Applications, Medical and High Purity. Today's product portfolio corresponds to a large variety of applications, from single pressure regulators and blowpipes for cutting and welding to sophisticated gas supply systems for medical and electronics industry applications.
